SUMMARY

SOC Analyst (L1) with hands-on experience in SIEM-based alert triage, log analysis & correlation, and end-to-end incident management across Windows and Linux environments. Skilled in threat detection using MITRE ATT&CK, Cyber Kill Chain. Investigated brute-force, C2 beacon, phishing, and DNS tunnelling events with formal incident reports and IOC documentation. Proficient in Splunk, Microsoft Sentinel, Snort IDS, Wireshark.

TECHNICAL SKILLS

Log Analysis	Log Correlation	Threat Detection & Triage
Incident Management	SIEM/Splunk	Email Analysis
MITRE ATT&CK	Windows & Linux log analysis	TCP/IP
IOC Enrichment	Alert triage	

PROJECTS

SOC Home Lab – Log Analysis, Threat Detection, Incident Management & Malware Analysis	2025 – Present
Winnows Server · Kali Linux · Windows 10 · Splunk · Snort IDS · Wireshark · EDR · SOAR · Sysmon · auditd · Python · Bash · Apache	
- Analyzed Windows Event Logs, Sysmon, Auditd, and Apache logs using Splunk (SPL) and Microsoft Sentinel (KQL) to identify anomalies, investigate security events, perform threat hunting, and support incident response. - Detected and triaged brute-force (SSH/RDP/FTP), C2 beacon patterns, DNS tunnelling, phishing, malware persistence (registry Run keys, rogue scheduled tasks), and DLL injection attempts; mapped every finding to MITRE ATT&CK techniques - Used Wireshark to decode C2 beacon traffic and DNS tunnelling payloads, extracting 14+ IOCs from raw PCAP; wrote and tuned Snort IDS/IPS rules for ICMP floods, Nmap scan variants, SQLi, XSS, and LFI; applied TCP/IP, DNS, and protocol knowledge during active threat investigations. - Enriched IOCs (IPs, domains, file hashes) via VirusTotal and Metadefender during incident triage; correlated reputation data with SIEM alerts to prioritise response; - Analyzed phishing emails, extracted indicators of compromise (IOCs), performed threat intelligence enrichment, and conducted basic malware analysis on malicious attachments to support incident investigation. - Applied security frameworks including MITRE ATT&CK (technique mapping and threat hunting), Cyber Kill Chain, OWASP Top 10, and ISO 27001 during security investigations and incident analysis.	

EXPERIENCE

Cyber Security Intern Amaha health	Nov 2024 – Feb 2025
- Monitored and triaged 15+ SIEM security alerts per week — performed log analysis and event correlation across operating systems and network infrastructure to identify anomalies; escalated confirmed incidents with documented IOCs and severity classification. - Led bug bounty triage program (35+ reports) and investigated phishing campaigns — classified incidents, tracked lifecycle from identification to closure, and authored structured incident reports with OWASP Top 10 mapping and escalation recommendations. - Conducted internal and external penetration tests on company web applications and network infrastructure, identifying exploitable vulnerabilities; deployed Cloudflare WAF rules and managed VPN access.	
VAPT Intern Secure Sleuths	Aug 2024 – Nov 2024
Performed VAPT on web applications, APIs, and network infrastructure — identified 25+ vulnerabilities including SQL Injection, XSS, CSRF, and security misconfigurations; delivered prioritized remediation recommendations to client security teams.	

CERTIFICATIONS

SOC Level 1 — TryHackMe · Verify: THM-GAA9MX2ZQK	Jan 2026
Cyber Security 101 — TryHackMe · Verify: THM-UQ4XFA52HW	Dec 2025

EDUCATION

Bachelor of Computer Applications (BCA)	May 2021 – May 2024
Himachal Pradesh Technical University, Hamirpur, HP	
Relevant Coursework: TCP/IP Networking, Web Application Architecture, Cyber security Fundamentals, OWASP Top 10, Cloud Basics
